

в ТПУ на полной компенсационной основе. За последние три года на подготовительном отделении факультета иностранных студентов прошли обучение по различным программам более 70 человек из КНР. После окончания обучения на подготовительном отделении и успешной сдачи экзаменов студенты получают сертификат знаний и воз-

можность, при наличии соответствующих документов, поступления на любой факультет университета. А для тех, кто уже имеет высшее образование и желание упорно работать, есть шанс поступить в аспирантуру. В 1997 году под руководством академика РАН В.Е. Панина окончил аспирантуру и успешно защитил кандидатскую диссертацию на тему "Исследование влияния деформации и облучения на структуру и свойства частично-кристаллического полиэтилена" первый иностранный аспирант ТПУ, преподаватель Цзилинского университета Хань Вэй. В настоящее время, вернувшись в Китай, Хань Вэй продолжает научно-исследовательскую работу в национальной лабора-

тории композиционных материалов, поддерживая тесные связи с нашим университетом, а на подходе к окончанию аспирантуры второй представитель КНР, бывшая студентка ТПУ Ван Сяо (научный руководитель профессор Ю.С. Нехорошев).

В. Г. Сипайлов,

к.т.н., директор СКЦ при ТПУ

About development of cooperation

between high schools of China and Tomsk polytechnical university. In the system of international contacts of Tomsk polytechnical university the relations with Chinese People's Republic play the important role. With the purpose of ordering and increase of efficiency of contacts with high schools and firms of CPR in 1993 in TPU there was created a

Siberian-Chinese center (SCC). One of the basic directions of activity of the center is the integration of TPU into the world system of education - science - economy. It develops from the establishment of cooperation with high schools of CPR, mutual increase of the quality of preparation of the young experts, development of research works, exchange of the professors, teach-

Аспирант ТПУ Хань Ван приехал в Томск из Цзилинского университета города Чанчунь в 1993 году, где работал преподавателем. Его визит в Россию, а именно в Томский политехнический университет, стал возможным благодаря визиту ректора Юрия Петровича Подколкова в Цзилинский университет, где ректоры подписали контракт по безвалютному обмену аспирантами. Когда Хань Ван продолжил учиться в Томске в старейшей в Сибири политехнической университете, он согласился, хотя языка не знал. Встретили

ers, scientific workers and post-graduate students. The Center promotes the development of direct contacts of the chiefs of universities and institutes, including growing up of economic activity on realization of its own developments and high technologies, and also commercial activity in the interests of the universities and regions.

During the existence of the Siberian-Chinese Center the strong business contacts with the largest higher schools of China, such as Chinese geological university (CGU) (Uhan'), Tzilin polytechnical university (Chanchoon'), Harbin polytechnical university (Harbin), Dalian' technical university (Dalian') etc. were established. The representatives of the Tomsk school of geologists O.D.Alimov and V.G.Lukyanov, who subsequently became the honourable professors of CGU, by the invitation of the Chinese side read a course of lectures in the Chinese geological university. In TPU with the answer-back course there lectured the professor of CGU Lyao Sinten, a participant of the designing and construction of the tunnel under the English Channel. In Tzilin polytechnical university the lessons were conducted by the academician of Russian Academy of Science, professor V.E.Panin and senior lecturer A.I.Slosman. Head of the TPU subfaculty M.M.Mikhailov arranges close cooperation in the field of space technology materials with Harbin polytechnical university. With the direct participation of the scientists - geologists, the textbook of the TPU professor S.S.Sulakshin "Controlled directional drilling" was translated into the Chinese language. One of the priority directions of activity of the

Siberian-Chinese center is the enrolment of the Chinese students to study in TPU on a complete compensatory basis. For last three years on the preparatory branch of faculty of the foreign students more than 70 persons from Chinese People's Republic have passed training on the various programs. After finishing the training on preparatory branch and successful passing of the examinations, the students receive the certificate of knowledge and the possibility, with presence of the appropriate documents, of reception on any faculty of university. And for those, who already has higher education and wishes to work persistently, there is a chance of reception in post-graduate school. In 1997 under the guidance of the academician of RAS V.E.Panin the teacher of Tse Lyng university Han Vay, the first foreign post-graduate student of TPU, has finished the post-graduate training and successfully defended the candidate thesis on the theme "Analysis of influence of deformation and irradiation on the structure and properties of semicrystalline polyethylene". Nowadays, when returned to China, Хань Вэй continues his research work in the national laboratory of composite materials, keeping up the close contacts with our university, and on the approach to the finishing of post-graduate school there is the second representative of PRC, former alumna of TPU, Van Syao (the scientific chief - the professor Y.S.Nekhoroshev).
